TABLE OF CONTENTS

- Section 1 Project Overview
 - 1.1 Purpose of Addendum
 - 1.2 Pre-Development Hydrologic Summary
 - 1.3 Updated Post-Development Hydrologic Summary
- Section 2 Updated Post Development Hydrologic Analysis
 - 2-Year Storm Event
 - 10-Year Storm Event
 - 25-Year Storm Event
 - 100-Year Storm Event
- Section 3 Supplemental Data
 - Updated Recharge Volume Calculations-Leaching Pits

Appendix A – Revised Post Development Watershed Plans

Section 1

Project Overview

1.0 Project Overview

1.1 Project Description

The purpose of this Stormwater Management System Report Addendum 1 is to address comments provided to the Town of Wareham Planning Board by their consultant Mr. Charles Rowley on his review of the Form C-Definitive Subdivision Plan entitled "Shell Point Place."

The following shall summarize the additional information provided in this Addendum:

- Revised Design of "Upper Drainage System" of leaching pits.
- Presentation of Revised Post Development Hydrologic Calculations incorporating revised leaching pit design and clarifying breakdown of subcatchment areas.
- Updated Post Development Watershed Plan

1.2 Pre-Development Hydrologic Summary

The summary provided in the Stormwater Management System Report of the pre-development hydrologic conditions for the 2, 10, 25 and 100-year storm events is submitted in Table 1.3 below for comparison to the revised Post Development Hydrologic Summary.

Table 1.2 – Pre-Development Hydrologic Summary

Storm Event	Analysis Point AP-1 Rate of Flow (c.f.s.)
2-year storm	0.01
10-year storm	0.22
25-year storm	0.91
100-year storm	3.24

1.3 Revised Post Development Hydrologic Summary

As mentioned above, the post development hydrologic calculations have been reviewed and revised to address comments made by the Planning Board's peer review consultant. We have reviewed and revised the subcatchment area land cover type breakdown to clarify the allotments of impervious area associated with the roadway, sidewalks, and driveways. We have also revised the calculations to incorporate the revised design of the "Upper Drainage System" with an increased number of leaching pits to maximize the retention of runoff up through the 25-year storm event.

A summary of the post-development hydrologic conditions for the 2, 10, 25, and 100-year storm events is submitted in Table 1.3 below.

Table 1.3 – Revised Post Development Hydrologic Summary

Storm Event	Analysis Point AP-1 Rate of Flow (c.f.s.)
2-year storm	0.00
10-year storm	0.07
25-year storm	0.22
100-year storm	0.87

A summary of the pre and post-development hydrologic conditions for the 2, 10, 25, and 100-year storm events is submitted in Table 1.4 below. Results shown as a “negative” represent a decrease in post development condition rates of runoff.

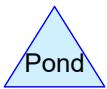

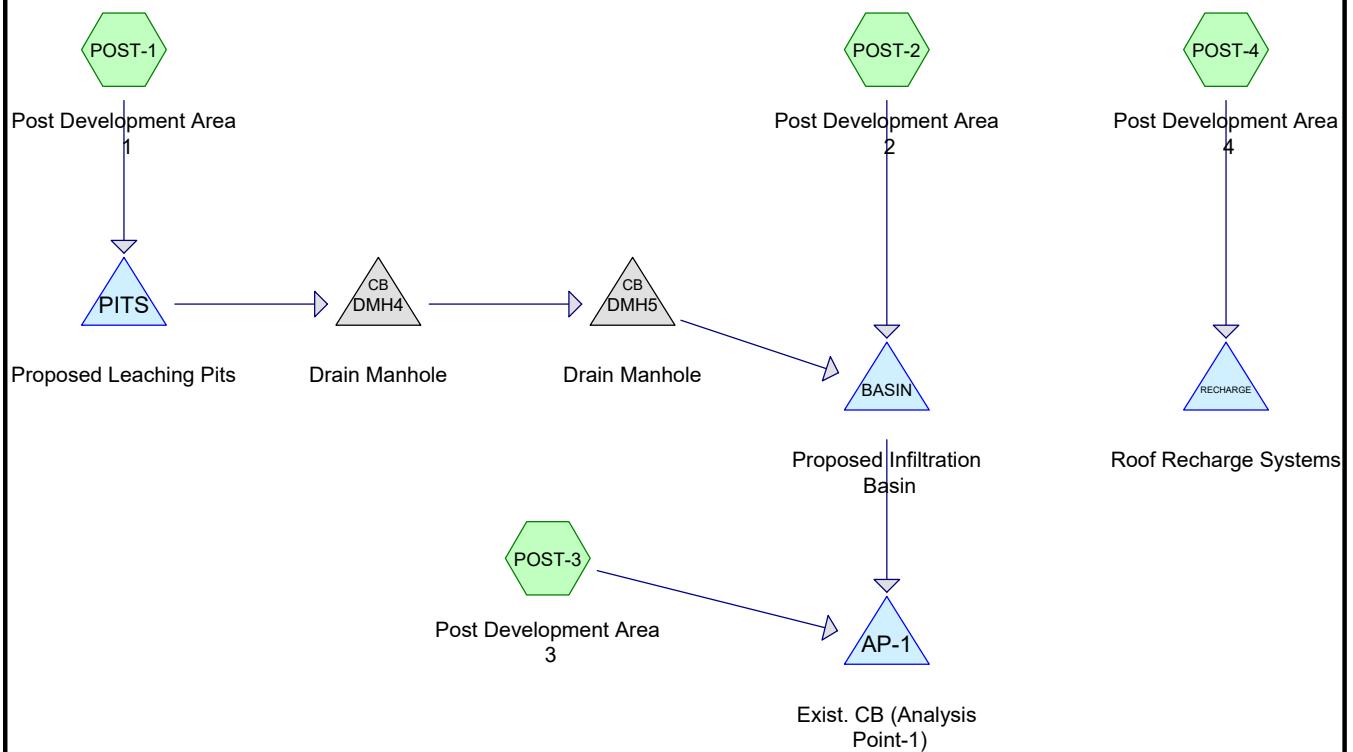

Table 1.4 – Pre-Post Development Hydrologic Results

Storm Event	Analysis Point AP-1 Rate of Flow
2-year storm	-100.0%
10-year storm	-68.2%
25-year storm	-75.8%
100-year storm	-73.1%

The hydrologic analysis indicates that the stormwater management system design for the site meets or reduces peak runoff rates for the 2, 10, 25 and 100-year, 24-hour, Type III storm events from the pre-developed levels at the subject analysis points. The analysis shows the proposed development of this project area will not result in an increase in the rates of runoff from the project site. It should also be noted that the proposed stormwater management system will also reduce the volume of runoff to the subject analysis points by over 80% in the 10-year and 25-year storm events and over 60% in the 100-year storm event.
