The Contractor will verify this data for all sales occurring until the valuation date of this program. The Contractor will develop and provide the Assessors with appropriate written documentation for the sales verification effort.

4.5 **Valuation Testing:** Manual or computer assisted valuation testing for all types of property will take place subsequent to sales verification. All valuation testing must be reviewed and approved by the Assessors before commencement of the valuation production.

4.6 Valuation:

4.6.1 The Contractor will compute, to the nearest One Hundred Dollars (\$100.00), the value of all properties within the scope of this Statement of Services. A minimum of two (2) approaches to value from the following three (3): market, cost or income, will be employed for all income-producing properties.

Income-producing properties include, but are not necessarily limited to, the following types: primarily commercial/industrial/multiple-use properties; apartments over four units; hotels and motels; storage, warehouse and distribution facilities; discount and department stores; shopping centers and malls; supermarkets; small retail properties; office buildings; medical office buildings, research and development facilities; and properties within industrial parks.

Valuation and market data will be provided to Municipality by Contractor for all special use properties such as hotels, motels, marinas, nursing homes, assisted living facilities, family entertainment facilities (Water Wizz), campgrounds, golf courses and mobile home parks.

4.6.2 The minimum requirements for each of the three (3) major approaches to value, as well as land valuation, are outlined in the following sections. The Contractor will describe the approach to value which will be applied to each type of property within the scope of this Statement of Services.

4.7 Market Value Approach:

4.7.1 The Contractor will employ a market adjusted cost approach. It is a system that is very easy to explain to the taxpayer, as well as a system which is very familiar to the Massachusetts Department of Revenue Certification Team. This approach is used on residential properties with its starting point based upon replacement cost approach values. It is then fine-tuned by adjusting these replacement cost values based upon market sales activity, segmented and segregated by the most pertinent property characteristics.

Land valuation will be accomplished through a sales ratio analysis of vacant sales, as well as an overall property ratio analysis, deducting improvement values and extracting land values from the improved sales. Each neighborhood, street by street, will be rated for desirability using a site index, which provides a factor that may be applied to a base square foot schedule to account for differences in location. In addition, condition factors

will be applied to account for negative or positive influences on value such as topography, view, irregular lot shape and other factors.

Overall property values, including improvement value, will be verified by the sales ratio analysis, segregated by the pertinent value related factors of each property. This analysis will be done within various categories, including style of home, segmented by size and age group in ten (10) year increments, by lot size and location factors. This analysis enables the Appraisers to fine-tune the replacement cost approach for each property to create a mirror image of market sales activity within the MUNICIPALITY.

Regarding commercial/industrial properties, the market value approach will be employed on properties not utilizing a combination of the replacement cost approach and the income approach. For commercial/industrial properties that are basically non-income-producing, the secondary approach will be the market approach, utilizing the square foot values derived from the sales analysis for the particular use type of the property. Square foot values will be segregated by type, including industrial, warehouse, retail, etc. and will provide reasonable ranges for per square foot sale prices of building areas. Land value, once determined, will be added to building value for an estimate of total value.

4.8 **Replacement Cost Approach:** The replacement cost approach to value will be employed for both residential and commercial\industrial properties as follows:

Information derived from cost analysis will provide the basis for determining the unit-in-place and replacement cost pricing schedules used in the valuation of residential and commercial\industrial properties.

Subsequent to the determination of replacement cost pricing schedules and the establishment of land values, the Contractor will analyze the sales of improved properties in order to derive an estimate of physical and functional depreciation and economic obsolescence. A report of this study of sales of improved properties will be made to the Assessors, listing the comparison subjects and detailing the schedules of adjustments to be made prior to valuation production.

Physical and functional depreciation and economic obsolescence will be computed to be the difference between the selling price of the total property and the sum of the estimated replacement cost new of the improvement plus the estimated land value.

Provided that a sufficient number of sales are available, guidelines in the form of tables based upon the condition, desirability and usefulness of a building relative to its actual age will be developed. After approval by the Assessors, these tables will be used to estimate the depreciation of comparable subject properties.

4.9 **Income Approach:**

4.9.1 The Contractor will review and screen income and expense reports furnished by the parcel owner, or prepared as a result of interviews with the property owner; will determine the validity of the data and will make any necessary adjustments on the basis of the Contractor's appraisal knowledge of income and expense data of comparable properties. The MUNICIPALITY shall be responsible for the postage and the mailing of income and expense forms. A report containing documentation and derivation of rent schedules, expense ratios and capitalization rates shall be submitted to the Assessors for review.

4.9.2 A value determined by the income approach to valuation will be made for each income-producing property. The income and expense statements will become the property of the MUNICIPALITY.

4.10 Land Valuation:

4.10.1 Basic square foot values for all parcels shall be established for land throughout the MUNICIPALITY after an evaluation by the Contractor of all factors affecting the market value of lots and parcels. Factors to be considered shall include the quality of the neighborhoods, zoning restrictions, size, frontage, depth, shape and topography of the parcels, and all other factors considered relevant in the establishment of land values for each of the various classes of property.

4.10.2 These land unit values will be determined as a result of an analysis of recent sales of comparable properties, either within the MUNICIPALITY or within an agreed upon area of the state, or by using a land residual approach. Any land classified by the Assessors under Massachusetts General Laws Chapter 61A as in agricultural or horticultural use will be valued after consideration of the current guidelines issued by the Farmland Valuation Advisory Commission.

4.11 **Preliminary Certification Review:** The Commissioner of Revenue must conduct a certification review to determine whether the new values resulting from this project represent full and fair cash value. As a condition of successful project completion, Contractor's work product will meet all certification requirements of the Commissioner.

4.12 Valuation Field Review:

4.12.1 The Contractor will provide field review services for 25% of all Residential and 0% of the Commercial/Industrial Real property parcels in the community. The personnel conducting this phase of the program will have three (3) years mass appraisal and field review experience and knowledge of the valuation techniques employed in the MUNICIPALITY, as well as complete familiarity with the valuation project.

4.12.2 It is understood that the Contractor will have the ability to exercise judgment in making final value estimates. The Contractor, in order to ensure valuation accuracy and

consistency, will be required to document such judgment. Documentation for changing any computer generated value estimates will also be required. All such documentation shall be the property of the Assessors.

4.12.3 If valuation changes are made due to data error, the data will be corrected on the computer and/or manual file by the Contractor.

4.12.4 All values produced by the Contractor will be given to the Assessors for final review and for a determination as to whether the Contractor's work product is satisfactory for the purposes of requesting a certification review by the Commissioner of Revenue. The Contractor will provide the Assessors with all valuation models and schedules, property record cards, sales analyses and field documents necessary to conduct this review. These documents will become the property of the MUNICIPALITY.

4.13 Certification of Values:

4.13.1 As a condition of successful project completion, the Contractor's work product will meet all certification requirements of the Commissioner.

4.14 **Defense Of Values:** The Contractor will provide expert witnesses to represent the MUNICIPALITY at all appeals to any court, the appellate tax board or otherwise, of valuations and/or classifications resulting from this project.
